

EPP Release R13 Notes

Release R13 was deployed from 2026-06-20 through 2026-06-22 in us-east-1.

The release included registry connection pool changes, timeout tuning, and additional telemetry for CHECK-DOMAIN and ADD-DOMAIN commands.

Known risk: CHECK-DOMAIN latency may increase if connection pool saturation occurs during peak traffic hours.

Rollback criteria: sustained CONNECTION_TIMEOUT failure volume above baseline for two consecutive hours or response_time above 220 milliseconds for CHECK-DOMAIN.
